

# Product Drying

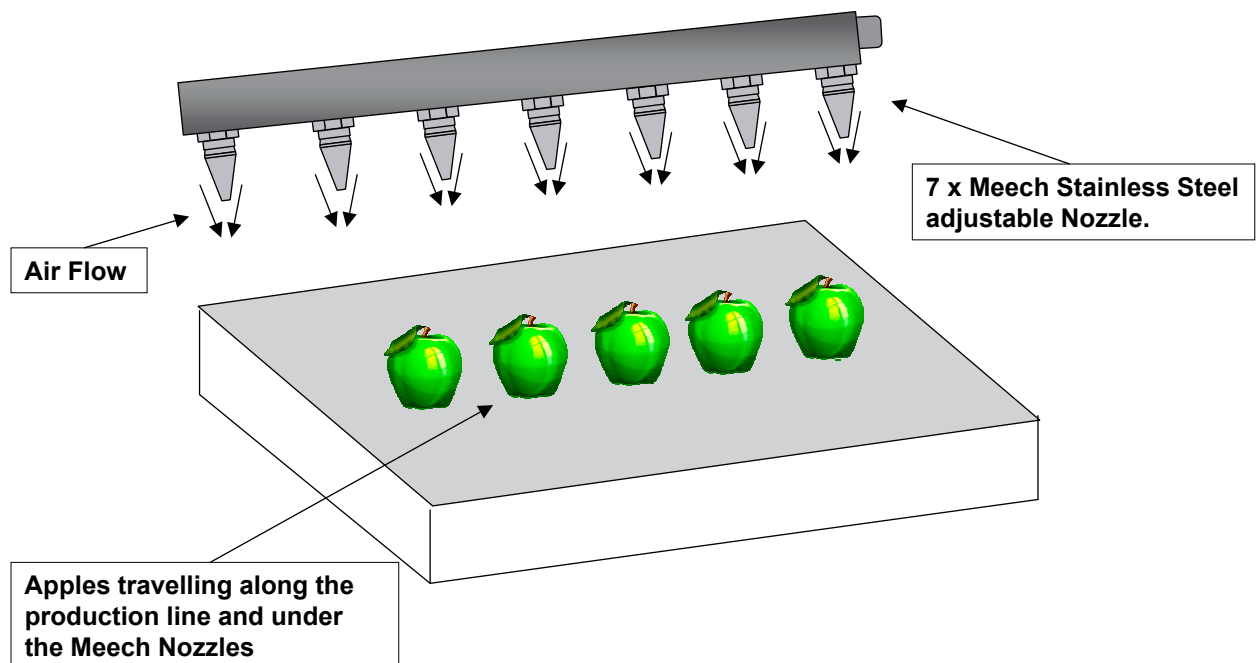

Energy Saving Safety Nozzle & Blow Gun

MAT - Energy Saving Safety Nozzle  
& Blow Gun - Product Drying -  
ISSUE 1/EN-01/10

## Application/ Problem

The design of the Meech Nozzle creates a “cone” of air. This “cone” of air is effective when used for drying spherical objects. Because the air comes to a point the air flow will allow for maximum drying potential.

## Example/Solution

A company producing apples wanted to stick a label to the apple shortly after the washing process. Because the apples were wet the company was experiencing problems attaching the stickers to the apple. A number of Air Nozzles were used to dry the apple before the stickers were put on. This solved the problem and the numbers of rejected apples were reduced.
